

Automatically generate thousands of tests in seconds

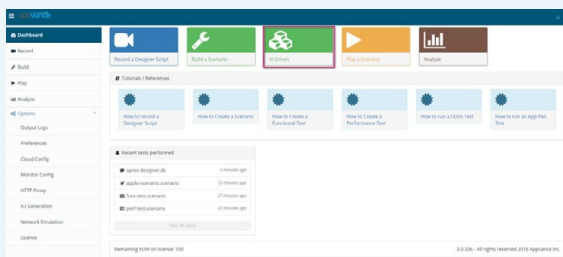

What is Appvance Ai?

A new breakthrough technology embedded in Appvance UTP, Appvance Ai learns an application using several data sources, instead of humans manually testing or writing scripts. Appvance Ai auto-generates hundreds or thousands of high-quality, valid scripts, which run as functional, performance and security tests.

What will Ai do for my team?

Appvance Ai transforms and empowers all QA team to focus on application usability, bugs, performance and layout issues instead of spending 90% of their time testing or scripting. Since Appvance Ai can generate over 1000 scripts in a few seconds, more than 1000x faster than humans, most recording & scripting tasks are eliminated – replaced with tests which better represent real user activity your system.

Typical Use Case

A company was considering automating 10k+ tests for their legacy application. Estimated man-hours to complete: 14k+. Vendors bids ranged from \$400k to \$1.2M to complete over minimum 6 months. After 2 hours of machine learning, Appvance Ai generated over 10k fully-valid tests in under three minutes. Appvance Ai enabled this company to consider immediately automating tests across their 100+ legacy applications, instead of one per year – and save millions of dollars in the process.

Appvance Ai Features & Benefits Checklist

- Generate 1,000's of tests *1,000x faster* than manual testing or scripting
- Increase test coverage over existing manual or automated testing
- Drive rapid Dev response, identify real end-user issues, re-test & verify
- Produce tests with *real end-user actions*
- Maintain tests automatically as applications change
- Upscale tests from API to UX-level
- Utilize tests without modification across functional, performance & security testing
- Augment and replace most manual testing and scripting tasks
- Launch tests using popular CI tools and align with DevOps

Empower Your Team with Super-Human Capabilities
